----- Changes since 1.8.5:- \* the code has been improved to support static libraries (ex: /usr/lib/libfoo.a) and dynamic libraries (ex: /usr/lib/libfoo.so). \* it's now more convenient to start this script on a tarball (ie: luatools-1.8.5.tar.bz2) instead of a directory. \* this script can now detect the target architecture (win32 vs unix) \* it's now possible to build packages which use autotools with make. \* many internal code changes. \* many small bugfixes. Changes since 1.8.3:- \* the install scripts have been removed and the module source code is now included in the build. \* many bugfixes. \* compatibility with GNU make. \* it's now possible to build for mingw32. Changes since 1.8.2:- \* the design of the installer scripts has been improved. \* it's now possible to specify the package source (luatext.tar.gz) \* it's now possible to specify a custom configure script (luatext.def) \* it's now possible to specify a custom link script (luatext.la) \* the detection of the package source has been improved. \* it's now possible to use the clang compiler with C++. Changes since 1.8.1:- \* the export argument has been removed. Changes since 1.8:- Changes since 1.7:- \* support for build.sh-like scripts: configure.sh, install.sh, and others. \* support for the BSD way of installing modules. \* luatools 1.7.4 is an alpha release. \* luatools 1.7.3 is an alpha release. \* many internal changes. Changes since 1.6:- \* support 82157476af
